

A

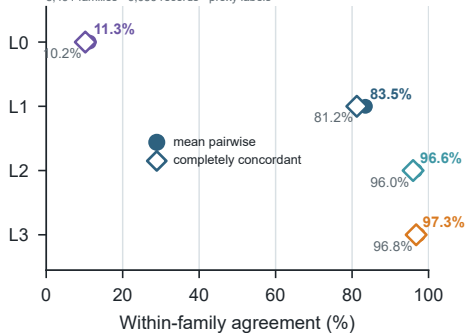

Nested molecular identity levels

B

CSD base-refcode family cohesion

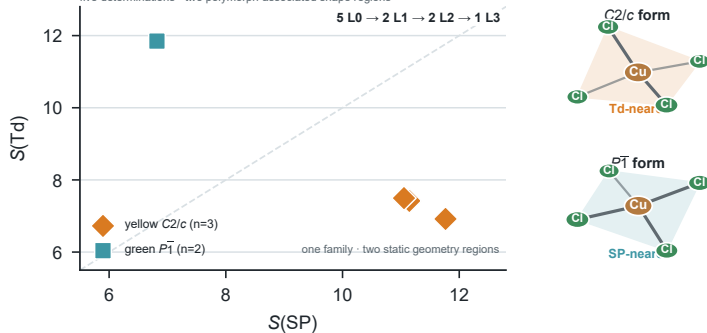

3,491 families · 9,056 records · proxy labels

C

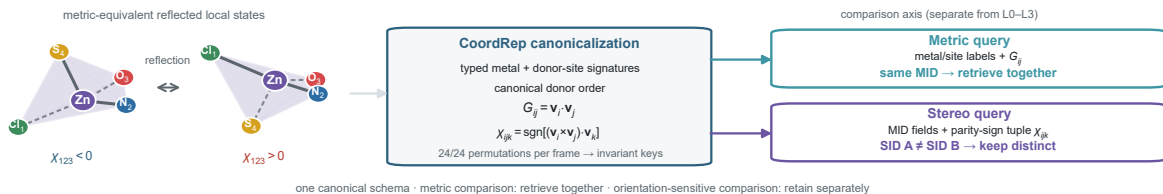

Bis(4-dimethylaminopyridinium) tetrachlorocuprate(II)

five determinations · two polymorph-associated shape regions

D

CoordRep makes periodic comparison resolution explicit

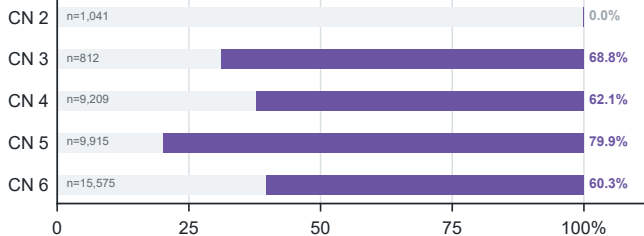

E

MID→SID splitting by coordination number

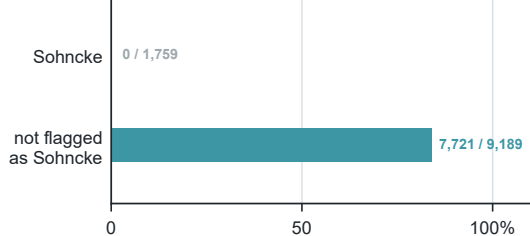

36,552 MID → 60,139 SIDs · 23,587 split (64.53%)

light: one SID · purple: two SIDs

Within-entry pairing by symmetry class

structure-first identities; space-group flag joined afterward

Equivalent crystallographic re-expression

400 / 400 entries
state multiset preserved

5,920 / 5,920 sites
MID + SID preserved (det > 0)

50 / 50 tests
MID preserved (det < 0)
